-Prepare lesson plan before teaching
-Create E-Gradebook in excel to record students' scores
-Teach Microsoft Access and advanced excel to adult
-Design Book Cover, school event flyer

- Upload content in school website of WordPress technology
- Customize website to be responsive in each device
- Update computer program curriculum for school
- Create school management system in Microsoft Access, VB.NET and SQL Server
- Install additional software and troubleshoot computing devices

2019-2024 : Worked as an IT Officer at Australian Center for Education (ACE)

- Manage overall technology infrastructure for the organization including planning, implementation, management of software application and hardware infrastructure that support the operation
- Ensure the maintenance of the organizations' system including computer support, software installation, license management, server setup and management, database administration, network, printer, scanner and deployment of equipment
- Manage web hosting CPanel such Mail Server, Bandwidth, storage, Email security Gateway, Burpsuit, OWASP, SQL injection, Penetrations Test Vulnerability
- Troubleshoot IT equipment, database system, phone system, data storage management, networking and security operation center (SOC)
- Join database team to innovate new technology in cloud architecture and auditing
- Manage IT Asset list to be up to date
- Update IT task every day
- Backup and restore SQL server file, script
- Control data center in each branch with primary and secondary server
- Administer EDR both cloud and on-prime server
- Auto shut down computer clients at limited time with EMCO Software
- Subnet IP address in each VLAN to have internet connection and computer network
- Setup computer for school event and share idea to IT team
- Maintenance intranet and extranet of Microsoft 365 including sharepoint, Exchange, Team, OneDrive
- Document standard configurations (server pool hardware/resource management)
- Check AV Access filtering report
- Work closely with line supervisor to develop and update audit programs, Working paper and auditing procedures in IT audit scopes and implement after Approval
- Examine IT internal controls, evaluate the design and operational effectiveness, Determine exposure to risk and develop remediation strategies.
- Manage time frame for each audit mission as agreed to achieve the plan
- The audit executions have followed the IT Policy, procedure and standard in order To ensure all kinds of IT risk are covered, managed and compiled with
- Perform regular audit testing and provide effective recommendations
- Discuss and clarify the finding with the auditee to a clear root cause
- Keep more concerns in each process to ensure that the internal control risks
- Ensure the audit documents are fully completed information and stored after finish The audit mission.
- Ensure constant capacity building and up to date of the company
- Wide Area office network, setup VLANs (Users, Servers, Printers, peripherals)
- Administer existing network and security system such as L3-Switches, Cisco Routers, Juniper, Catalyst, Managed-Switches, Security Gateway, FortiGate Firewall Mikrotik Router, AP, CCTV
- Apply port security, HA, static routing, dynamic routing, ACL, NAT, IPSec VPN Tunneling, load balancing, failover, TCP/IP, SSL, SSH, BGP

- Troubleshoot database apps and servers' issue such as SAP, IBM, EPP, CRM
- Install and upgrade network hardware
- Backup and restore network configuration to network infrastructure, system state
- Exchange proxy firewall to exchange server in each country
- Advance blockchain technology
- Control database technology such as MongoDB, PostgreSQL, Ms. SQL Server Oracle
- Fix issue PABX and apply ISDN in branches
- Follow up with vendor about QOS Internet, Network Devices, PCs, Printers, AP And Access Control security
- Check root cause about software development, confidential documentation, adhoc Task, servers and photocopier
- Run terminal command line in Debian

2024-Present : Work as an IT Supervisor at Raffles Medical Clinic

- Update User requirement with on-going support with EMR (Doctor System) and RCMS (CSR System) as well as user satisfaction
- Install, configures and monitors all installed network requirements
- Monitor and test application performance for potential bottlenecks, identify possible solution and work with developers to implement those fixes
- Write and maintains custom scripts to increase network efficiency and lower the human intervention times on any task
- Ensure the highest level of network infrastructure availability, plan, implement network infrastructure as required for better efficiency
- Collaborates with other professionals to ensure high-quality deliverable within organization guidelines, policies and procedure
- Provide technical support to end-users and resolve technical inquiries
- Assists in the coordination of various teams testing and evaluating for the development of design and its implementation of the best output
- Competency in writing and maintaining custom scripts to increase system efficiency and lower downtime due to required human intervention
- Desire to work alongside the team to help design information and operational support network infrastructure
- Check Firewall Policy, routing protocol, switching protocol, VPN for fortigate, CISCO, Huawei and IP table.
- Check load balancer with Nginx and HAProxy
- Pretend as a white hacker for DDOS protection and Wireshark scanning vulnerability
- monitor network traffic with Cacti, Zabbix, Grafana, Nagios
- Provide solution for customer about storing the project with different categories in stock
- Update user interface with developer team to enhance POS and CRM
- Set process flow and algorithms to flow chart to lead into development process
- Manage sale team to check target with daily expense, income and sale
- Design database via user requirement and create store procedure to CRUD
- Analyze existing computer system such as QuickBooks server, Conicalhat System, Warehouse management system with inbound and outbound logic
- Collaborate with stakeholders to elicit, analyze and document business requirement
- Design and develop technical specifications, system flow and architecture diagram based on business needs

- Research and evaluate software solution and technology to determine their sustainability for meeting business requirement
- Develop test plan, perform system testing and conduct quality assurance checks to ensure the accuracy and reliability of implemented system
- Provide training and support end-users to facilitate the algorithms and utilization of new system
- Maintain comprehensive documentation of system configurations, processes, procedure, generate reports and documentation
- Configure Mikrotik RouterOS, AP and make recommendations for upgrades and improvements
- Help marketing team to design name card, banner, flyer, brochure and poster
- Monitor CCTV signal and bandwidth to ensure it is working properly
- Install AD service to store user profile and SAN
- Configure Cisco Router and L2-Switch to applying VLAN
- Perform testing hardware, software; troubleshoot as well as quality assurance
- Manage WIFI Accessibility using hotspot and strong password policy
- Draw network infrastructure logically and configure port security
- Configure next generation firewall, juniper switches, link aggregation, ether-group, STP, inter-vlan routing
- Manage cloud-based hosting CPanel (Web hosting and Mail Server)
- Provide solution and troubleshoot for accounting system
- Support users, prevent trojan horse, ransomware, phishing and spyware, SCCM, WSUS, GPO, Printing service, schedule backup
- Follow up with developers with click up
- Update with users about UAT with Jira platform

VI. Language:

Khmer : Mother tongue
 English : Good (speaking, reading, listening, and writing)

VII. Hobbies:

Reading books, newspapers, doing assignments, watching tutorials related to Information Technology and playing some sports.

Consultancy Service for Church Computer Labs within 10 Churches

I got the information from Bongthom website that you need consultancy service for church computer labs within 10 Churches. With Postgraduate master degree in Information Technology, and hands-on experience in troubleshooting in Network and cybersecurity skill, I am confident that I will be asset to your team.

I enjoy being challenged and engaging with maintenance that requires me to work closely with hardware device and knowledge set, as continuing to learn new thing from internet and develop techniques and important to me. I have knowledge in many programming languages such as C/C++, Ms. Access, C#.Net, Java. I have experienced in western international school with Ms. Office, graphic design, configuration could compute, Anyway, I know how to configure virtual machines server and client, database management, Phone System, Email Server, networking and security, data storage management and setting up a new professionally. As an IT Front Desk Officer at hope school, I can design banner for school and administer mikrotik to AP. Moreover, I must manage liaising with technology infrastructure for organization including planning, implementation, management of the software applications and hardware infrastructure that support operation, liaising a relevant technology service provider. So on, I ensure the maintenance of the company including- general computer support, software installations; license management; server setup management, database administration, networking and cybersecurity, periodic security vulnerability assessment and updating hardware and software at WMC. I research and learn potentially, improve performance and upgrade a new twenty-first century technology innovation. I used to work as an IT Officer at ACE where I must modify existing office devices such as computers, printers, photocopiers, servers, cloud and networking or security infrastructure. I also work as an IT Administrator at Sika Company that is a global company. At Sika Company, I must manage demands for local IT Service and align demand with regional IT. I strongly configured site-to-site VPN with hash algorithms (AES-256, md5 and group 2) to improve security certificate, SMTP, FTP, SSH and more. Moreover, I also have knowledge in Web Development both client-side and server-side with some technology such as HTML5, CSS, JavaScript, JQuery, Ajax and ASP.Net.

In addition, I have strong interpersonal skills and motivation. I have very strong commitment and honest with job working qualify with your job requirement and I am confident that my knowledge at school and willing Innovation will improve my ability. I would be most grateful if an interview could be offered. I am looking forward to hearing from you soon.

Yours sincerely

RI LIUOY
